FRONT GLAZED SYSTEM

JKA
Commercial
Glazing

When the design calls for a glass facade, the COMMERCE Front Glazed System is the answer.

The system is suitable for Low to High Rise curtain wall applications and is also extensively used for Sloping Atrium applications.

Available in 100mm and 150mm Frame Widths.

The Double Glazed System provides good sound insulation reducing outside noise levels and minimising the use of heating and cooling appliances, saving money on energy bills.

A simple square cut system with aesthetic appeal, clean lines and accommodating Glass Thicknesses from 5mm up to 12.38mm in Single Glazed and from 21mm to 28mm Insulated Glass Units in Double Glazed.

Pre-slotted self-draining transoms and sills and concealed drainage pockets optimise weather performance. Simple fabrication with minimal machining required saves you time and labour costs.

Provision for mullion splicing for added strength in high wind areas and options for glazing internally, externally or structurally bonded glazing.

Subhead, subjams and subsills are recommended for use in exposed weather conditions.

The System takes advantage of other EZIAL suites, doors and windows and can be complimented with a range of louvres and infill panels.
