Glazing

Popular and flexible, the COMMERCE Centre Glazed System will meet all general wind load/ span requirements.

Ideal for SHOPFRONT applications and available in 101.6mm and 150mm widths, the COMMERCE Centre Glazed System is suitable for glass thicknesses from 5mm up to 12.38mm.

The strong extruded profiles mean spans up to 3 metres can be easily achieved.

Easily fabricated with the use of straight cutting.

Labour costs are reduced with the use of a captive wedge .

Self Draining sills and transom designs optimise weatherability and maximise water management.

The COMMERCE Architectural Systems range has been designed with a modular theme in mind allowing for the incorporation of other EZIAL Framing suites, doors and windows and can be complimented with a range of louvres and infill panels.

Subhead, subjams and subsills are recommended for use in exposed weather conditions.
